## C# Output

The screenshot displays the Visual Studio IDE with a C# console application. The code editor on the left shows the following code in `Program.cs`:

```
1 // See https://aka.ms/new-console-template for more information
2 Console.WriteLine("Hi!!!");
3 Console.WriteLine("Hello, World!");
4
5 Console.Beep();
```

The code is partially highlighted in yellow. The Solution Explorer on the right shows the project structure for `ConsoleApp1`. The Microsoft Visual Studio Debug Console on the bottom right shows the output of the program:

```
Hi!!!Hello, World!

C:\Users\user\source\repos\ConsoleApp1\ConsoleApp1\bin\Debug\net6.0\ConsoleApp1.exe (process 8112) exited
To automatically close the console when debugging stops, enable Tools->Options->Debugging->Automatically close console when debugging stops.
Press any key to close this window . . .
```
