What is the difference between routing, and endpoints and resource?

5 Answers

3 different concepts here:

55

- **Resource:** {id: 42, type: employee, company: 5}
- **Route:** localhost:8080/employees/42
- **Endpoint:** GET localhost:8080/employees/42

You can have different endpoints for the same route, such as **DELETE** localhost:8080/employees/42 . So endpoints are basically actions.

Also you can access the same resource by different routes such as localhost:8080/companies/5/employees/42 . So a route is a way to locate a resource.
